**EXAMINER'S RESPONSE**

1. In response to the application filed 7-31-00, the application has been examined. The examiner has considered the presentation of claims in view of the disclosure and the present state of the prior art. And it is the examiner's opinion that the claims are unpatentable for the reasons set forth in this Office action:

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 5-12, 14-24 and 26-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over LaPorta (US 5959543) and Nysen (US 5252979).

La Porta discloses an announcing device or pager and method as claimed ad-hoc multicasting in col. 13, but does not specify ad-hoc network. Nysen discloses an analogous art two way communication system with ad-hoc network in col. 6 line 45 - col. 7 line 3 and it would have been obvious to have included such in LaPorta in order to provide local privacy. Regarding claims 2-3, 11-12 and 24 LaPorta includes queues in fig. 10. Regarding claims 5-7, 14-16 and 21-23 Nysen discloses limitation to near vicinity or proximity and signal strength and number of hops are well known manners to measure proximity or vicinity in the communication art.

Art Unit: 2635

4. Claims 4, 13 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over LaPorta (US 5959543) and Nysen (US 5252979) as applied above and further in view of Will (US 5479408).

5. Will discloses an analogous art two way pager and method including queue with order dependent on urgency. See cols. 18 and 23. It would have been obvious to have included the queue order dependent on urgency of Will in the combination applied above to assure that priority data is transmitted in a timely manner.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cannon (US 5850594) discloses a two way pager with processor and data base of member information within the pager.
